## Find People. Fast!

Typically, finding a coworker's number in the corporate intranet directory hasn't been quick or easy. A static entry field leads to a search results page, which in turns leads to a directory listing.

Let QuestObjects technology rev up your current static search field in record time. With the PeopleFinder QuestField, you can type in some of a first or last name, or some of each, then choose from results in a drop-down area that appears immediately, while you type. Or type in just enough for the autocomplete to finish with the correct name. Double-clicking a name from the drop down or hitting <Enter> for the autocompleted name takes you directly to the appropriate directory page.

In most cases, you simply want to contact someone. With the PeopleFinder QuestField's rich data drop-down, you

immediately see the person's phone number, or you can click on an envelope icon to start an e-mail message, without leaving the current intranet page.

The QuestField achieves considerably higher performance because it receives and displays limited result batches from the QuestObjects Enterprise Server: only what the user sees has actually been transmitted over the network. Performance is excellent even scrolling through thousands of records.

520 results

The QuestField not only allows faster retrieval, it also shows typing mistakes immediately. Rather than loading a page saying "no results found," the user can just backspace and correct the spelling.

## "Wow. It's Fast!"

### Supported clients

- Most web browsers including: Microsoft Internet Explorer 5.1+ (Windows or Mac), Firefox 1.0+, Apple Safari 1.0+, Netscape Navigator 7+, Mozilla 1.4+, Galeon 1.3+
- Macromedia Flash Player version 6r79 or higher (Certified on Windows 98, Windows 2000, Windows XP, Mac OS 10.2-10.4, Mac OS 9.2, Red Hat Linux 7-9. Supported web browsers and CSS support vary by platform.)

### Server requirements

- JVM 1.4.x or 1.5.x (Tested on Windows 2000-2003, Windows XP, Solaris, HP-UX, OpenVMS, Red Hat Linux, Mac OS X)

### Supported content sources

- SQL databases
- LDAP directory servers
- Easy-to-use open Java "plug-in" API for other content sources

### ✓ Time Savings

- Super-efficient data transfer means you don't have to wait for large result sets to load.
- With autocomplete, a few keystrokes may be all you need to enter.
- Rich data in the drop-down lets you see the person's phone number immediately or click to create an email.

### ✓ Improved Accuracy

- Spell-checking lets you know instantly if you have made a mistake. Never see "Results Not Found" again.
- Autocomplete reduces the opportunity to make typing errors.
- Rich results help you choose the right "John Smith."

### ✓ Easy Implementation

- QuestObjects technology is compatible with most web browsers, databases, and server software.
- QuestFields can replace static fields without rewriting any application code.

With the valuable time the PeopleFinder QuestField saves on each directory search, the employee time savings will pay for the product many times over. Plus, the increased accuracy saves more by avoiding time wasted dealing with mistakes.

## QuestObjects Technology

QuestObjects is a powerful new ultra-thin smart client/server technology that has the potential to revolutionize data retrieval over the Internet. Now, for the first time, users of web applications and handheld wireless devices can have direct, instantaneous and continuous access to enterprise data stored on remote servers. This enables you to find and process critical information much faster and more accurately than any web technology currently available.

Over three years in the making by a team of expert software developers, QuestObjects technology is the power behind QuestFields, which can substantially improve the speed and efficiency of browser-based applications everywhere. By replacing static HTML fields with QuestFields, Internet applications can now have the same data retrieval speed and power – as well as the "look and feel" – that LAN applications have enjoyed for decades.

> **"I love seeing the person's phone number or clicking to create an email without leaving the page I'm on"**

A QuestField on a web page is in effect a miniature, stand-alone client/server application capable of initiating highly optimized sessions with a database on a remote server. QuestFields leverage the textual nature of web applications by sending and retrieving short bursts of string-based data that give users immediate feedback, without the need to click on a submit button or leave the current page.

The PeopleFinder QuestField can be added to intranet portals and Internet websites without rewriting existing application code or changing the HTML layout. Busy IT staff will appreciate the quick and painless installation and testing.
